RESEARCH INTEREST

My work is broadly in trustworthy AI and ML, data management, and human-centered data science, aiming to develop data-centric solutions in knowledge-intensive fields, including genomics, medicine, healthcare, finance, and legal, etc. My research lies at the intersection of data and predictive models (e.g., using Artificial Intelligence (AI) and Machine Learning (ML) algorithms), with a focus on *hallucinations*, *explainability*, *algorithmic fairness*, and *the mitigation of unreliable solutions*. I also work in enhancing *AI and ML education* and public engagement.
